

Smart Laundry

WASH SMARTER, WASTE LESS

Buy detergent in bulk, concentrated, or non-liquid form

This typically costs less, and reduces single-use plastic packaging.

Wash full loads only

Wait until you have enough laundry for a full load. Half-full loads waste water, energy, and detergent. Using cold water further reduces energy use and may help extend the life of your clothes.

Recycle used detergent and softener containers

Find the recycling symbol and number on the bottom of your plastic bottle and check your local requirements to make sure they accept it.

Line dry when possible but opt for dryer balls over dryer sheets when using the dryer

Hang clothes to dry. This saves energy and extends the life of clothing. If you need to use the dryer, dryer balls reduce the drying time and avoid waste and chemicals from using dryer sheets.
